

Deliverable Phases

Chris McCorkle, Elian Zamora

1. Phase 1

- Phase one will consist of building the backend support of the project, this will include -
 - Designing the master list
 - Adding all the functional components
 - Adding
 - Removing
 - Editing
 - Displaying
 - Creating the skeleton of the website and deciding where to place our UI objects
 - Implementing the API structure
 - Creating all the necessary user endpoints
 - Creating responses and visual feedback for API request / responses
- Assigned team members to this phase - Chris McCorkle, Elian Zamora
 - By having both team members contribute here we can get a solid grasp of the flow of the site which will allow for both of us to better implement phase 2

2. Phase 2

- Phase two will consist of building the front end user experience, this will include -
 - Designing the website itself
 - UI Elements
 - Add / Remove buttons
 - Displaying the Current task list
 - Implementing visual feedback inline with the site's design
 - Styling

- Placing all UI elements in their respective spots along the list
- Implementing ways for the user to interact / edit their tasks
- Hooking up the API endpoints with their respective UI components
- Assigned team members to this phase - Chris McCorkle, Elian Zamora
 - We will also be completing this phase as a team, this way we can both design and implement ideas for the website
